EDUCATION

University of Nevada, Las Vegas
B.S. Computer Science — Honors College

Expected May 2027
GPA: 4.0/4.0

EXPERIENCE

JT4 (Amentum)

May 2026 – Present

Systems Software Engineering Intern

Las Vegas, NV

- Engineered a real-time C++ simulator generating **IRIG-106 Chapter 10** flight-test telemetry and a PySide6/Qt monitoring interface, avoiding an estimated **\$30K** in commercial software licensing costs
- Sustained real-time telemetry generation at **1,000+ packets per second** across configurable channels and packet streams, enabling pre-field stress testing of downstream processing systems
- Achieved **93% test coverage** with GoogleTest and validated output against flight-test logs for protocol accuracy

STARS Solution LLC

Nov 2025 – Present

Software Engineering Intern

Las Vegas, NV

- Led a team of **5+ developers** building the Spring Boot backend for a veterans' career platform, integrating data across **30,000+ schools** to serve a **3,500+ user** pilot
- Reduced AI recommendation **time to first response by 95% (8.2s to 0.4s)** by decoupling generation with RabbitMQ and streaming partial results to clients via **Server-Sent Events**
- Reduced institution-search latency by **66% (110ms to 37ms)** using a cache-aside Redis layer with versioned invalidation and graceful database fallback
- Improved recommendation accuracy by **22%** by filtering structured candidate data and reranking vector-retrieved context before generation

PortRN

Nov 2025 – Jul 2026

Software Engineer (Co-Founder)

Las Vegas, NV

- Co-founded and engineered a professional networking platform where candidates showcase portfolios, verify technical skills, and connect with recruiters, serving a **50+ user** beta cohort
- Cut portfolio generation time from **7–10 to 4–5 minutes** by parallelizing AI workloads across **10 RabbitMQ consumers** with asynchronous job processing
- Integrated **Stripe** payments using webhook-driven fulfillment and **idempotency keys** to safely handle request retries and prevent duplicate transactions

LEADERSHIP

Bit2Byte

Nov 2025 – Present

Co-Founder & Lead Developer

Las Vegas, NV

- Co-founded and grew UNLV's software development organization to **100+ members**, serving as technical lead across **2+ project teams** building full-stack applications with **React/Next.js, Spring Boot, and Django**
- Led **5+ technical workshops** and coordinated project execution through sprint planning, standups, and code reviews, helping students adopt collaborative software engineering practices

PROJECTS

HotelGuard | [Devpost](#) | *1st Place, RebelHacks 2026*

Jan 2026

- Won **1st place among 35+ teams** at RebelHacks 2026 by building a real-time hotel risk-detection platform combining computer vision with AI-assisted video analysis
- Engineered a concurrent video-analysis pipeline using **YOLOv8 tracking** and parallel LLM processing, reducing analysis time by **60%** while generating room-level risk scores from occupancy and behavioral signals

Chess Engine | [GitHub](#) | *C++20, SFML*

Jan 2026 – Present

- Built a C++ chess engine searching **500K+ positions per second** using legal move generation, board evaluation, and alpha-beta pruning
- Accelerated sliding-piece move generation using **magic bitboards** and precomputed attack tables during search

TECHNICAL SKILLS

Languages: C/C++, Java, Python, Go, TypeScript, SQL

Backend & Data: Spring Boot, Node.js, FastAPI, PostgreSQL, Redis, RabbitMQ

Cloud & DevOps: AWS (ECS, EC2, S3), Docker, Linux, Git, CI/CD, CMake, GoogleTest

Frontend: React, Next.js
